

PUMPKIN 1

WITH THE HUMMINGBIRD KIT

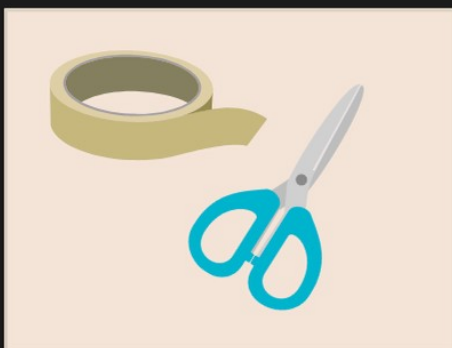

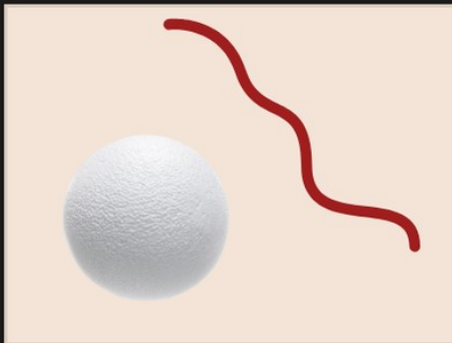

PUMPKIN 2

WITH THE HUMMINGBIRD KIT

JACK-O- LANTERN

1. Use an exacto-knife or pencil to poke a hole in your styrofoam ball. Insert your orange or tri-color LED. The part of the ball where the light enters is now the bottom.
2. Cut a small stem out of a brown pipecleaner. Stick it into the top of your ball.
3. Cut the jack-o-lantern face that you'd like out of black paper. Tape or glue it to your styrofoam ball.
4. Program your LED light to make your creation glow or flicker.

Take your pumpkin to the next level by making it spin with a rotation servo, or triggering the glow with a sensor. Have fun!
